| PROCEDURE   3033 |        SYSTEMS SOFTWARE         | DATE:    04/26/02 |
|_____|                                |_____|

| TITLE:   Non-standard Output Tapes (Nine-Track and Cartridge)     |
|_____|

| Purpose |
|_____|
This procedure describes the steps necessary to create a non-standard
output tape.

| Exceptions and Exclusions  |
|_____|
Users who supply their own output tapes for use by the creating job are
excluded from this procedure.

| Procedures  |
|_____|
Before submitting a job which will create a non-standard output tape,
the user must contact the Tape Library.  The following label information
must be supplied:

   a.   the density required .
   b.   if the tape is to be standard-label (SL) or for non-labeled (NL).
   c.   the job name.
   d.   the estimated time the tape will be used.

The Tape Librarian will then furnish the user with a volume serial
number.

The user must then specify that volume serial number specifically in the
volume parameter of the DD Statement which creates the tape e.g.
VOL=SER=001234.  In addition, the user must specify the appropriate JCL
needed to create the output tape, e.g. for a nine-track tape specify
UNIT=TAPOLD and for a cartridge UNIT=CRTLRG.
